Carbon sources & Global carbon budget

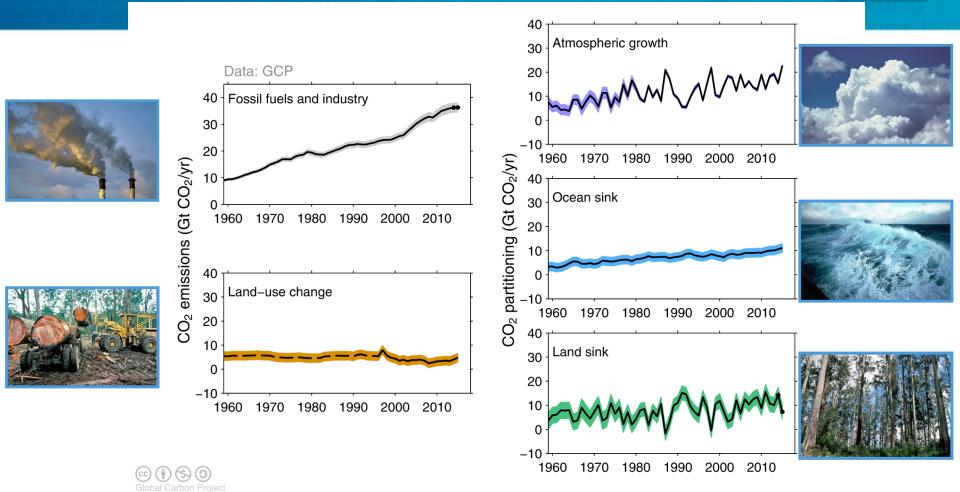

The carbon sources from fossil fuels, industry, and land use change emissions are balanced by the atmosphere and carbon sinks on land and in the ocean.

The sinks have continued to grow with increasing emissions, but climate change will affect carbon cycle processes in a way that will exacerbate the increase of CO₂ in the atmosphere.

Source: CDIAC; NOAA-ESRL; Houghton et al 2012; Giglio et al 2013; Joos et al 2013; Khatiwala et al 2013; Le Quéré et al 2016; Global Carbon Budget 2016

Changes in the budget over time

The emission pledges (INDCs) of the top-4 emitters

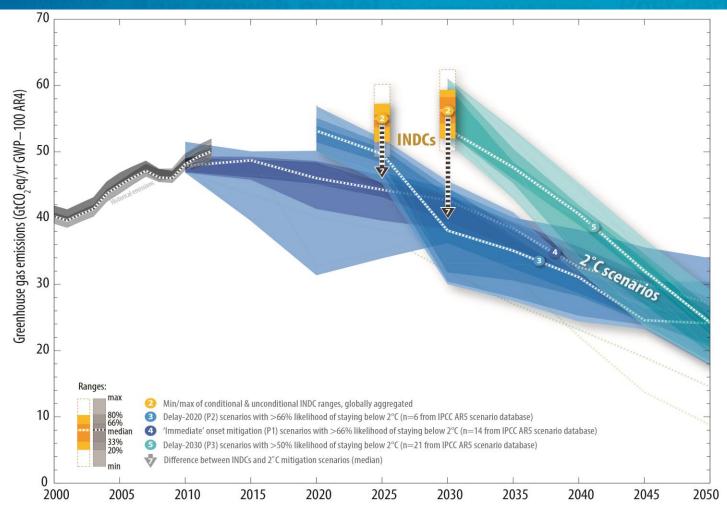

The emission pledges from the US, EU, China, and India leave no room for other countries to emit in a 2°C emission budget (66% chance).

Source: Peters et al 2015; Global Carbon Budget 2016

1ères approximations sur les INDC: marges & probabilités

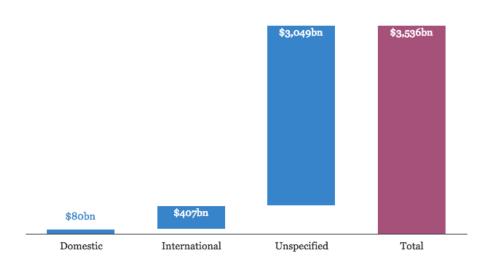

Source: UNFCCC (2016), Updated synthesis report on the aggregate effect of INDCs – published 2 May 2016

2^{ème} approximations: hétérogénéité et conditionnalité des INDC

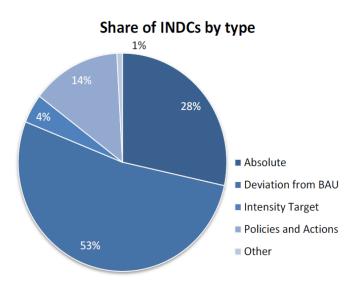

Most of the iNDC (almost all developing countries) are **conditional to international support of finance, technology transfer, and capacity-building.** The implementation of these conditional targets will depend on the ambition of the Paris agreement's mechanisms (finance, technology, market, etc.).

Financial needs expressed by developing countries Parties in their iNDC for the 2015-2030 period

Année

Trajectoire de décarbonation: encore le flou artistique à ce stade

The emission pledges to the Paris Agreement avoid the worst effects of climate change (4-5°C).

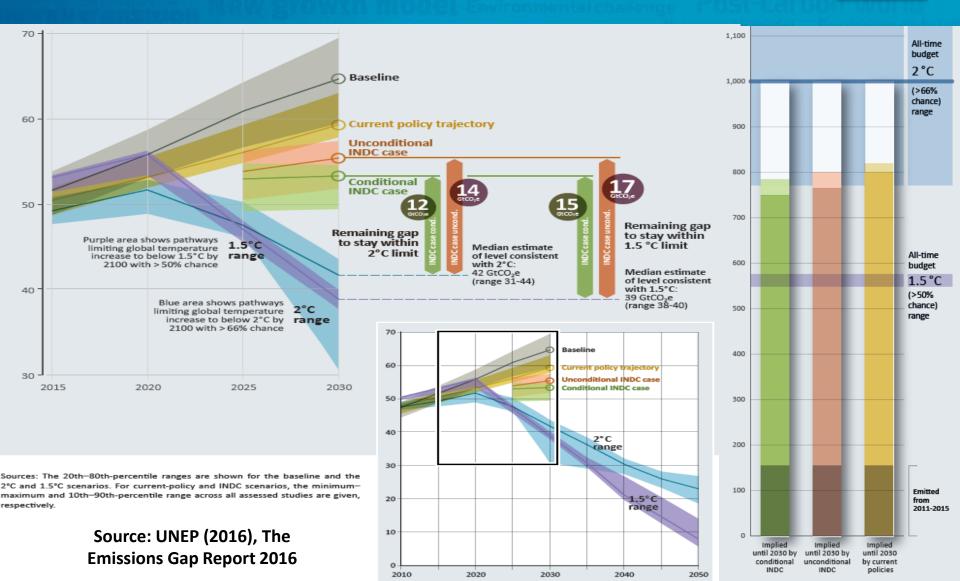

Most studies suggest the pledges give a likely temperature increase of about 3°C in 2100.

But we actually don't know...

Ambition Mechanism in the Paris Agreement

COP22: bilan & perspectives

19 novembre 2016, Causerie d'Avenir Climatique, Clément Bultheel

www.theshiftproject.org

The main issues that are (still) discussed

Equity and Differentiation

Share the responsibility between historical, current and future emissions, as well as emissions per capita, considering national circumstances and global carbon budget

Mitigation

Action to move towards low-carbon societies by the end of the century to stay below 1.5 or 2°C

Adaptation

Adapting to climate change consequences & Building resilience to reduce climate vulnerability

Loss & Damage

Implement a mechanism to respond to climate disasters

Transparency

Regarding the contributions : onitoring, Reporting & Verification (MRV)

Financing

Reach US\$ 100 billion for developing countries by 2020, and further increase investments in low-carbon development & technologies

Capacity-Building

To improve poor and vulnerable countries capacity to enhance climate action

Technology Transfer

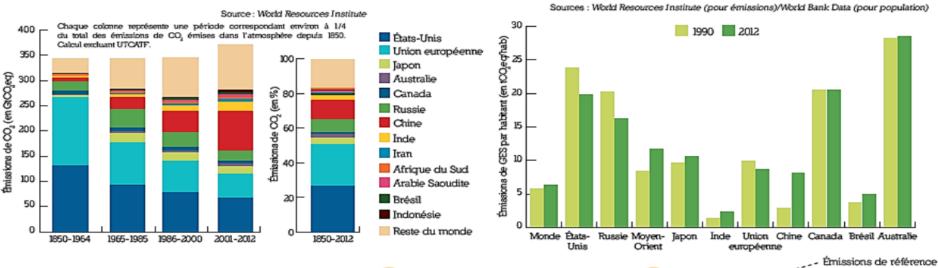

Help developing countries to have access to low-carbon technologies

A need to recognize diplomatic efforts to negotiate the share of responsibilities

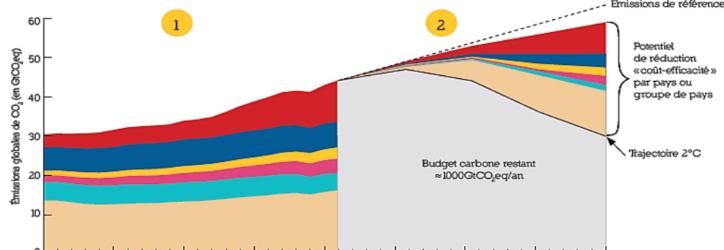

Émissions de GES par habitant (en tCO,eg/hab)

Émissions globales de GES de 1990 à 2011 et trajectoires coûteffectif jusqu'à 2030 (en GtCO₂eq/an

 Émissions globales de GES de 1990 à 2011

Trajectoire «coût-effectif» de réduction d'émissions par pays pour atteindre l'objectif des 2°C = différence les émissions globales et le

We almost end up with political negotiations

A new three-way differentiation in the Paris Agreement:

- 1. The maintaining of a binary distinction between developed and developing countries, most notably on the topic of North-South financial commitments;
- 2. A particular regime for least developed countries (LDCs) and/or small island developing States (SIDS) concerning the regularity of national communications, or priority access to financial resources, most notably for adaptation. This regime allows, by contrast, a convergence between the obligations of other developing countries (notably emerging countries) and of developed countries;
- 3. A flexible regime based not on groups of countries but on the specific conditions of each country, for example national circumstances and respective capabilities. However, this flexible regime will have to demonstrate its coherence and progress in order to bring States to improve their actions.

(Source: Bultheel et al., 2015)

Beyond ambition, how to judge the success of the Paris Agreement?

The success of Paris COP 21 could be judged in the light of several criteria:

- -the **global** nature of the agreement (the **number of Parties signatories**);
- -the **long-term** objectives of the agreement (eg reduction of global emissions by 75% by 2050, zero net emissions by the end of the century, etc.);
- -the **dynamic** nature of the agreement (ie its ability to strengthen the ambition of countries over time; as such, a **5-year review mechanism** for national contributions is the option on the table);
- -the **transparency** of commitments (**Monitoring**, **Reporting** and **Verification**, so-called "**MRV**") to build confidence;
- -the **international support** to developing countries in terms of **finance**, **technology transfer**, and **capacity building**.

Expectations for COP22

What are we expecting?

A Conference of the Parties serving as the meeting of the Parties to the **Kyoto Protocol** (CMP) & the first Conference of the Parties serving as the meeting of the Parties to the **Paris Agreement** (CMA).

The "COP of implementation":

- Increasing the ambition of domestic action;
- Strengthening action on mitigation and adaptation by all Parties before 2020;
- Mobilizing finance, technology and capacity-building.
- First high-level annual event on pre-2020 ambition for the period 2016-2020
- Facilitative dialogue "to assess the progress in implementing decision 1/CP.19, paragraphs 3 and 4, and identify relevant opportunities to enhance the provision of financial resources, including for technology development and transfer and capacity-building support, with a view to identifying ways to enhance the ambition of mitigation efforts by all Parties"
- Initiation of a process to identify the information to be provided by Parties in developed country on their biennial finance communications for consideration and adoption at CMA1
- Launch of the capacity building work plan for the period 2016-2020 managed by the Paris Committee on Capacitybuilding

COP22's results: keep calm and let the experts work on technicalities!

What are the next important steps?

COP23 (2017):

 Adaptation Committee to review adaptation institutional arrangements in 2017 to prepare recommendations for CMA1;

COP24 (2018):

- IPCC to provide a special report in 2018 on impacts of global warming of 1.5C;
- SBSTA to develop modalities for the accounting of financial resources provided and mobilized through public interventions to make recommendations for consideration at COP24 and adoption at CMA1;
- APA to develop recommendations for common modalities, procedures and guidelines as appropriate for transparency of action and support for consideration at COP24 and adoption at CMA1;
- Facilitative dialogue among Parties in 2018 "to take stock of the collective efforts of Parties in relation to
 progress towards the long-term goal referred to in Article 4, paragraph 1, of the Agreement and to inform
 the preparation of nationally determined contributions pursuant to Article 4, paragraph 8, of the
 Agreement";

COP25 (2019):

Review progress of Paris Committee on Capacity building with a view to make recommendations of appropriate action and on enhancing institutional arrangements for CMA1;

COP26 (2020):

- Parties to communicate by 2020 (minimum 9-12 months before the relevant COP or earlier) a new NDC for those whose commitment period is to 2025;
- Parties to communicate or update by 2020 (minimum 9-12 months before the relevant COP or earlier) an NDC for those whose commitment period is to 2030.

What are the next important steps for CMA?

Conference of the Parties serving as the meeting of the Parties to the Paris Agreement (CMA):

- APA to develop guidance on features of NDC's for consideration and adoption at CMA1
- SBSTA to develop rules, modalities and procedures for the sustainable development mechanism for adoption at CMA1
- Adaptation Committee, LDC Expert Group, and Standing Committee on Finance to develop methodologies and recommendations on mobilization of support in line with the temperature goal and review of adequacy and effectiveness of adaptation support for CMA1
- CMA1 to consider common time frames for nationally determined contributions

NDCs: it should only progress, except with US Republicans rulling...

The role of International Cooperatives Initiatives (ICIs)

"ICIs, where mitigation ambition is enhanced outside the UNFCCC framework as a complement to Party pledges for those Parties and/or other stakeholders that wish to do so, can be one possible option to help close the pre-2020 ambition gap. The number of ICIs is growing and they offer many possibilities to support, and go beyond, pledges." (Source: Ecofys)

Initiatives by sectoral areas:

- Renewable Energy (Energy Supply)
- Energy Efficiency & Energy Access
- Cities & Subnationals
- Transports
- Buildings
- Short-lived climate pollutants
- Agriculture
- Forestry

- Adaptation & resilience
- Financial instruments (ex: Carbon pricing coalition; Auction facility; etc.)
- Private Finance & Business
- Technology transfer and development
- Capacity building
- Innovation

ICIs by type of stakeholders

International organizations:

- United Nations agencies (<u>UNEP</u>; <u>UN-Habitat</u>; <u>UNDP</u>; <u>FAO</u>; <u>World Bank</u>)
- EU agencies (Commission; ERBD; EIB)
 - Others international institutions (IEA; <u>IRENA</u>; <u>IPEEC</u>; <u>FIA</u>; <u>CEM</u>)

International coalitions:

- Public sector (IDFC)
- Private sector (<u>UN Global Compact</u>; <u>WBCSD</u>; <u>We Mean Business</u>)

Local authorities:

- Cities (C40; ICLEI; WMCCC => Mexico City Pact [carbonn registry] & LG Climate Roadmap)
- Regions (<u>R20</u>)
- Local governments (<u>UCLG</u>)

Further multilateral cooperation on climate issues

Others negotiations frameworks linked with climate change:

- <u>UN Sustainable Development Goals</u> (2015-2030)
- UN International Strategy for Disaster Reduction (UNISDR)
- Montreal Protocol on Substances that Deplete the Ozone Layer (1987)
- Negotiations on Environmental Good & Services (EGS) as part of the WTO
- + G8, G20, and OECD

Others political initiatives to strengthen political dialogues on climate issues:

- Major Economies Forum (2009)
- Carthagena Dialogue (2010)
- Petersberg Dialogue (ex-Greenland Dialogue) (2010)

Examples of key research projects:

The New Climate Economy report

Deep Decarbonization Pathways Project

L'essentiel désormais: se concentrer sur le rapport coût-efficacité de la décarbonation

Example of some new important announcements

- -Indonesia's government extended its forest protections by declaring a moratorium on clearing super-high-carbon intact peatland. That adds to the number of concessions that are covered by the existing moratorium.
- -Walmart, the largest company by revenue and the largest private-sector employer in the world announced its science-based target on the same day as the Paris Agreement came into force.
- [...] Walmart will work with suppliers to reduce emissions by 1 Gigaton by 2030, equivalent to taking more than 211 million passenger vehicles off US roads and highways for a year".

United Nations Framework Convention on Climate Change (UNFCCC)

Financial Mechanism:

Green Climate Fund (GCF), Global Environment Facility (GEF), World Bank climate funds, etc.

Technology Mechanism:

Technology Executive Committee (TEC), Climate Technology Centre and Network (CTCN)

Capacity-building Mechanism

> Support for developing countries

Reinforce & complement governmental action

UNFCCC regulatory framework

Transparency framework 5-year review process

Represent the "ratcheting up" mechanism for NDCs

Nationally Determined Contributions (NDCs)
